

#### ARMED FORCES:

Foam and Mastic Remover can be utilised when stripping components that contain asbestos. The FS-D-164 has disinfecting qualities and as such can be used for area clean ups in large and small areas.

#### MINING:

The FS-HV Foam can be developed so that when placed on top of a shot pattern, dust would be minimised.

#### COUNCILS:

Councils can use the foam when ruptures occur in asbestos pipes. Foam can be sprayed onto each damaged surface and upon the ground to encapsulate the asbestos fibres.

This same foam can be used for removing asbestos gaskets and rope.

FS-D164 can be used as a disinfectant when sewerage spills occur or when repairs need to be made to pipelines.

FS-D164 can also be used on biohazards such as rat and pigeon infestations around parks, bridges, buildings and other structures.

## Industry Specific

FOAMSHIELD™ HAS MANY UNIQUE PRODUCTS FOR SPECIFIC APPLICATIONS

Each of the individual foams has specific uses in the Armed Forces, Mining Industry & Councils around Australia

**100% biodegradable  
green technology**
